Benda Berputar

# **BUNGA BERPUTAR**

# Membuat Background dari Polygon

```
point2D_t langit[4]={{-320.,240.},{-320.,-240.},{320.,-240.},{320.,240.}};  
point2D_t pusat={0.,0.};  
gradiatePolygon(langit,biru,5);  
  
// gradiatePolygon(langit,biru,3);  
// gradiatePolygon(langit,biru,4);
```

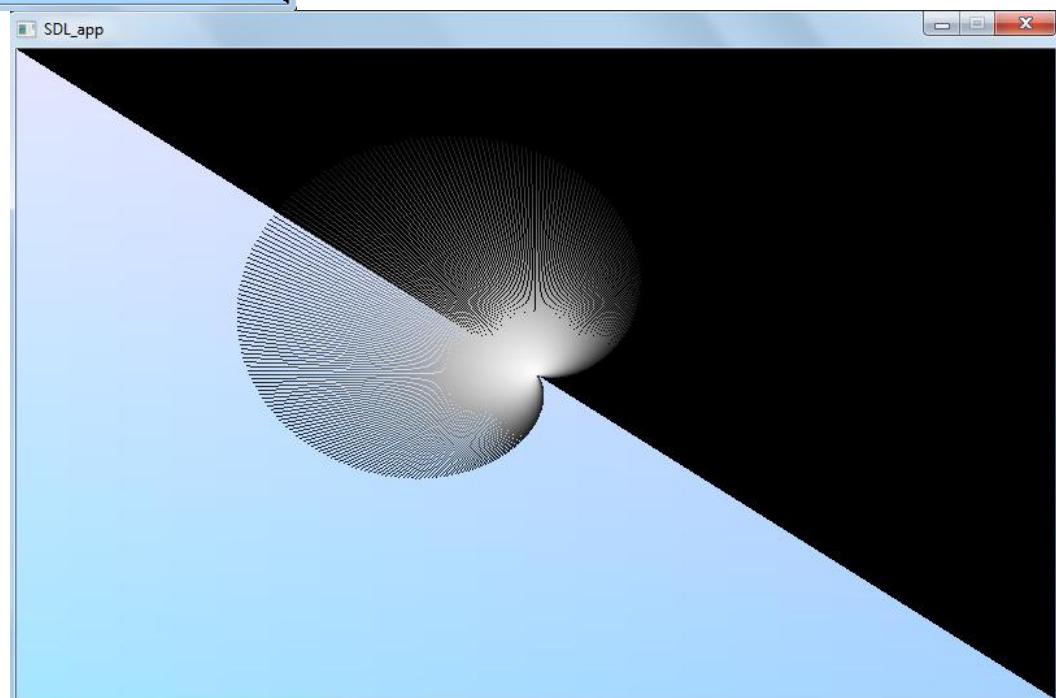

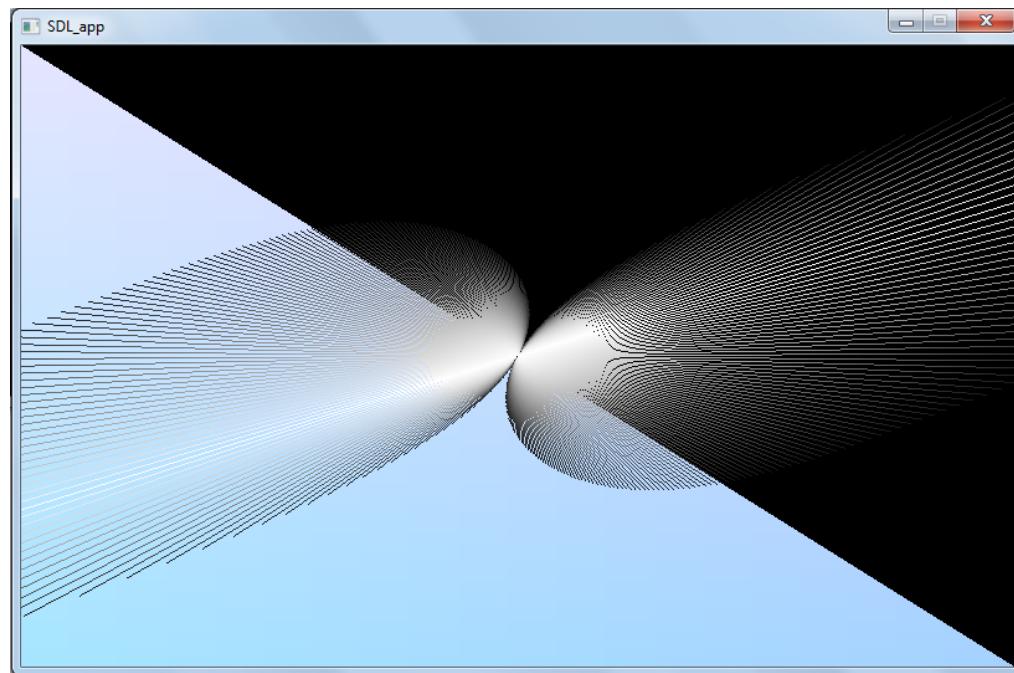

# Mengatur Bunga Berputar

```
point2D_t bulan[360];

for(i=0;i<360;i++)
{
    //ingat 1 derajat=3.14/180.radian
    r=100*sin(2*i*(3.14/180));

    // boleh dicoba dgn fungsi trigonometri lainnya
    //r=100*(1+cos(i*(3.14/180)));
    //r=100*(1+tan(i*(3.14/180)));
    bulan[i].x=r*cos((i*(3.14/180))+tick);
    bulan[i].y=r*sin((i*(3.14/180))+tick);
}
centerPolygon(bulan,pusat,kuning,putih,360);
```

# Mengatur Warna

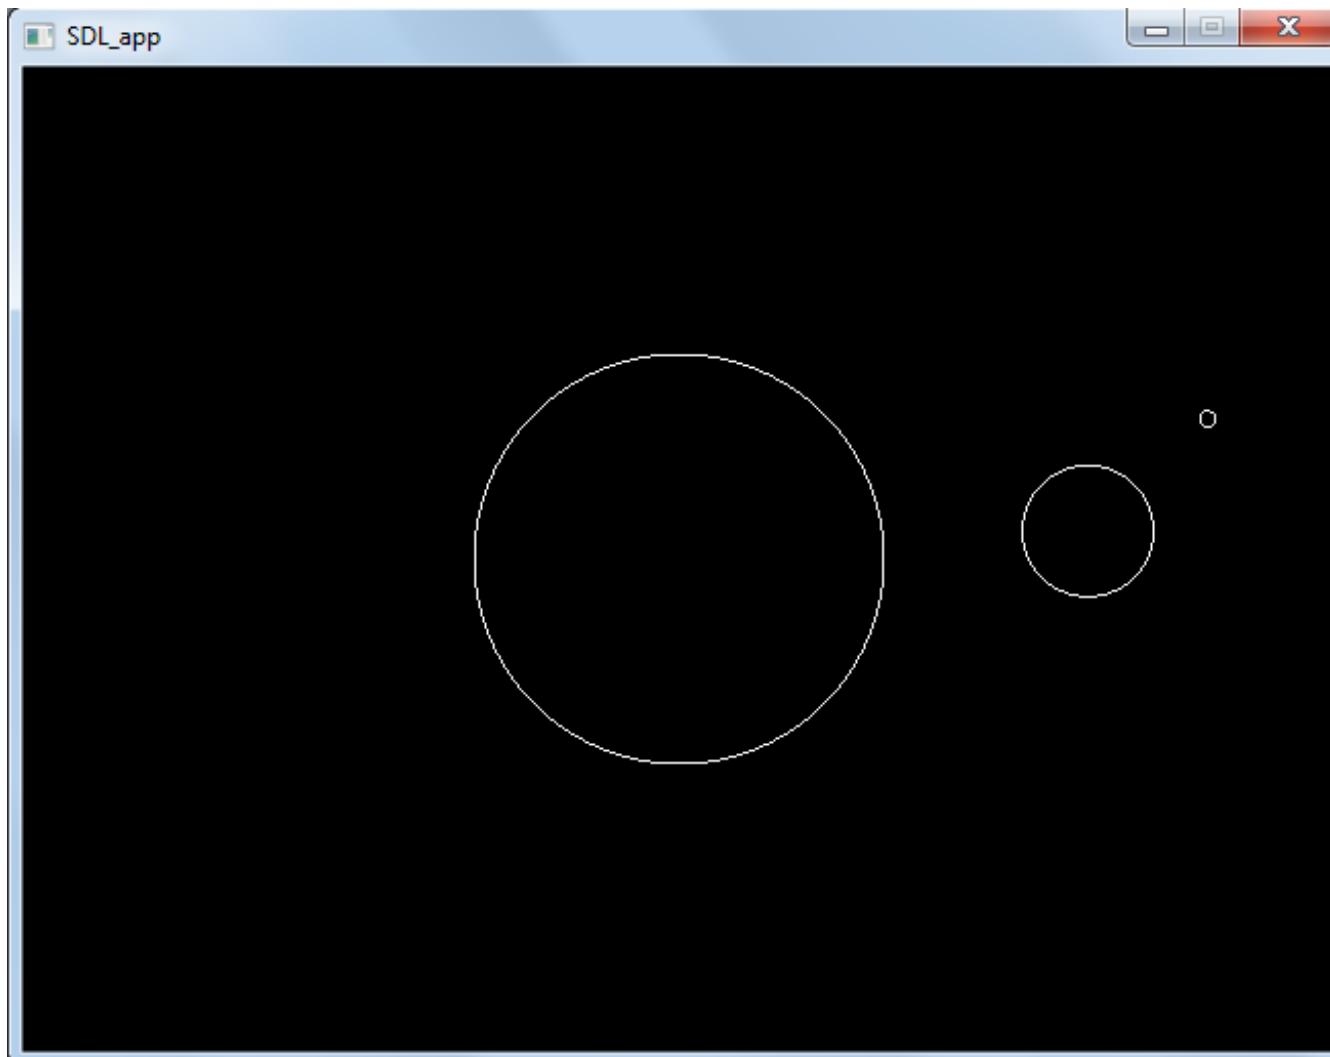

```
color_t biru[4]={{0.9,0.9,9.},{0.65,0.9,9.},{0.65,0.82,9.},{9.,9.,9.}};  
color_t kuning={0.1,0.1,0.1};  
color_t putih={1.,1.,1.};  
color_t merah={1.,0.,8.};
```

# Mengatur Kecepatan Berputar

```
tick-=0.001;  
if(tick2>600)  
    tick2=0;  
else  
    tick2+=0.001;
```

Benda Berputar / rotasi / revolusi

# **BULAN BUMI MATAHARI (BBM)**

# Membuat Bulan Bumi Matahari

```
point2D_t matahari[360],bumi[360],bulan[360];
vector2D_t vec;

// membuat matahari (tidak bergerak)
drawCircle(matahari,360,100);

//matrix bumi
matrix2D_t mat=rotationMTX(tick)*translationMTX(200.,0.)*scalingMTX(0.32,0.32);

//matrix bulan
matrix2D_t mat2=mat*rotationMTX(tick2)*translationMTX(250.,0.)*scalingMTX(0.12,0.12);
```

```
// memutar bumi
for(int i=0;i<360;i++)
{
    vec=Point2Vector(matahari[i]);
    vec=mat*vec;
    bumi[i]=Vector2Point(vec);
}
drawPolygon(bumi,360);
```

```
// memutar bulan
for(int i=0;i<360;i++)
{
    vec=Point2Vector(matahari[i]);
    vec=mat2*vec;
    bulan[i]=Vector2Point(vec);
}
drawPolygon(bulan,360);
```

# Pergerakan/perputaran patah-patah

// pada userdraw() ditambahkan :

```
Uint32 current_tick = SDL_GetTicks();
```

```
float tick=0.0003*current_tick/16;
```

```
float tick2=0.003*current_tick/16;
```

// pada main() ditambahkan :

```
SDL_Delay(250);
```

# Pergerakan/perputaran lembut

// pada main() :

```
static float tick=0,tick2=0;
```

```
tick+=0.0001;
```

```
tick2+=0.0001;
```
