ABSTRAK

ABSTRAK

Kelengkapan dokumen rekam medis sangat berpengaruh terhadap informasi yang dihasilkan pada dokumen rekam medis tersebut, di RSUD Ungaran masih sering ditemukan ketidaklengkapan dalam pengisian dokumen rekam medis. Tujuan penelitian ini adalah mengidentifikasi kelengkapan pengisian dokumen rekam medis secara kuantitatif dan kualitatif, menghitung angka kebandelan dokumen rekam medis rawat inap periode triwulan I tahun 2014 di RSUD Ungaran.

Jenis penelitian ini menggunakan metode deskriptif dengan pendekatan crosssectional dan pengumpulan data dengan cara observasi, checklist, melakukan analisa terhadap dokumen rekam medis rawat inap pada pasien yang telah diisi. Sampel penelitian adalah 99 dokumen rekam medis rawat inap.

Hasil penelitian ketidaklengkapan secara kuantitatif pada setiap review menunjukkan review identifikasi 40%, review pelaporan 53%, review pencatatan 51%, review autentifikasi 61%, secara kualitatif pada setiap review menunjukkan review kelengkapan dan kekonsistenan diagnosa 30%, review kekonsistenan pencatatan diagnosa 26%, review adanya informed consent 4%, serta perhitungan kebandelan dokumen rekam medis 98,9%.

Kesimpulan, dari hasil perhitungan masih banyak sekali dokumen rekam medis yang tidak lengkap dalam pengisiannya. Saran, perlu adanya perbaikan manajemen dan unit rekam medis agar para tenaga medis melakukan pencatatan data secara lengkap dan berkesinambungan.

Kata Kunci : analisa kuantitatif, analisa kualitatif, dokumen rekam medis

QUANTITATIVE AND QUALITATIVE ANALYSIS OF THE INPATIENT MEDICAL RECORD DOCUMENT IN THE 1ST QUARTER PERIOD AT THE GENERAL HOSPITAL UNGARAN IN 2014

ABSTRACT

ABSTRACT

The completeness of medical record document highly affects information that is generated that medical record document. We often find the incompleteness of medical record fulfillment and the inaccuracies of patient disease diagnosis, in RSUD Ungaran. The purpose of this research is to identify the completeness of medical record document fulfillment in quantitative and qualitative ways, calculate obstinacy amount of medical record document hospitalization, and also the relationship between the incompleteness of medical record document and the accuracy patient in the first quarterly period of 2014 in RSUD Ungaran.

This research uses descriptive method with cross sectional approach and collect data by observation, checklist, analyzing hospitalization medical record document on patient that has been filled. The sample of this research is 99 hospitalization medical recors documents.

The result of incompleteness in quantitative way in each reviews show that identification review 40%, reporting review 53%, recording review 51%, authentication review 61%. In qualitative way in each review show that completeness and diagnosis consistency review 30%, completeness and consistency reporting diagnosis review 26%, informed consent review 4%, and calculating of medical record document obstinacy 98,9%.

The conclusion of calculating result, there are still a lot medical record documents have incompleteness of their fulfillment. As suggestion, management and medical record unit refinement are needed, in order to make medical personnel write data recording completely and continuously.
