ABSTRACT

The application of technology-based self-service in terms of the providing services has grown rapidly in the current year, but nowadays, the understanding of customer retention and satisfaction is still limited. This research suggests the conceptual framework which is using the relational benefits to explain the relationship between the attributes of internet-based-self service technology on customer loyalty and customer satisfaction. The result of an empirical study, context uses two supported ands to fully mediated by the model. The confidence benefits addressing the impact which is considered as a control and performance on customer loyalty and customer satisfaction. Whereas, special treatment benefits mediates the relationship efficiency and convenience with customer loyalty and customer satisfaction. Besides that, it does not only impact on marketers but also to the future research regarding relation benefits to the customers which is based on internet self service.
