**ABSTRAK**

Latar Belakang : Antenatal Care merupakan pengelolaan ibu hamil sejak awal kehamilan sebelum anak lahir untuk persiapan dalam menghadapi persalinan. Persepsi mengenai mutu layanan tergantung pada harapan. Didapatkan pengetahuan ibu kurang mengenai ANC, beberapa ibu menyatakan kurang puas terhadap pelayanan anc, ibu tidak selalu melakukan pemeriksaan anc di puskesmas.

Metode : Penelitian ini menggunakan metode kuantitatif dan rancangan penelitian cross sectional. Uji statistik yang digunakan adalah uji Chi Square. Teknik pengumpulan data dalam penelitian ini adalah kuesioner. Jumlah populasi penelitian adalah 300 ibu hamil dan jumlah sampel adalah 75 ibu hamil yang memeriksakan kehamilan di Poli KIA Puskesmas Dempet.

Hasil : Hasil dari penelitian mendapatkan bahwa persepsi ibu cukup baik mengenai pemeriksaan antenatal care dengan persentase 65,3%. Hasil uji statistik menunjukkan bahwa ada hubungan antara karakteristik pengetahuan ( $p$  value=0,038), pekerjaan ( $p$  value=0,044) dengan persepsi ibu hamil tentang pemeriksaan Antenatal Care. Tidak ada hubungan antara umur ( $p$  value=0,556), pendidikan ( $p$  value=0,154), dan jumlah kelahiran hidup ( $p$  value=0,269) dengan persepsi ibu hamil tentang pemeriksaan Antenatal Care.

Saran : Petugas puskesmas dan kader diharapkan mengupayakan peningkatan pengetahuan ibu hamil melalui kegiatan posyandu atau pertemuan-pertemuan lain yang diadakan

**ABSTRACT**

**Background:** Antenatal Care is the management of maternal in early pregnancy before the child born to prepare delivery. Perception of the quality of services depends on the expectation. Obtained the mother's knowledge about the ANC, some mothers reported less satisfied with the services ANC, mothers do not always perform ANC examination in the clinic.

**Methods:** This study used quantitative methods and cross sectional study design. The statistical test used Chi Square test. Data collection instrument of this study was questionnaire. A study population of 300 maternal and the number of samples were 75 maternal during their pregnancy in Dempet PHC KIA Poli.

**Results:** The result of the study found that a mother's perception was quite good regarding antenatal care with a percentage of 65.3%. Statistical analysis showed that there was a relationship between the characteristics of knowledge ( $p$  value = 0.038), occupation ( $p$  value = 0.044) with the perception of pregnant women about the examination Antenatal Care. There was no correlation between age ( $p$  value = 0.556), education ( $p$  value = 0.154), and the number of live births ( $p$  value = 0.269) with the perception of pregnant women about the examination Antenatal Care.

**Suggestion:** PHC officers and volunteers are expected to work on improving the knowledge of pregnant women through the GMP or other gatherings.
