**ABSTRACT**

The purpose of this research is to analyze the influence of gross regional domestic product, third party funds, and financial ratios on lending distribution. The population of this research are banking companies that listed on the Indonesia Stock Exchange over the period 2011-2015. The data used in this research were obtained from the annual report of banking companies that published by IDX. The samplings are collected using purposive sampling technique, with the number of 126 samples. The analysis technique used in this research is multiple linear regression analysis. The result shows that gross regional domestic product and third party funds have a positive and significant influence on lending distribution, while financial ratios measured by capital adequacy ratio and non performing loan have no significant influence on lending distribution.

**Keyword** : gross regional domestic product, third party funds, capital adequacy ratio, non performing loan, and lending distribution
