# Introduction to Communication Systems and Networks

#### **Telecommunications**

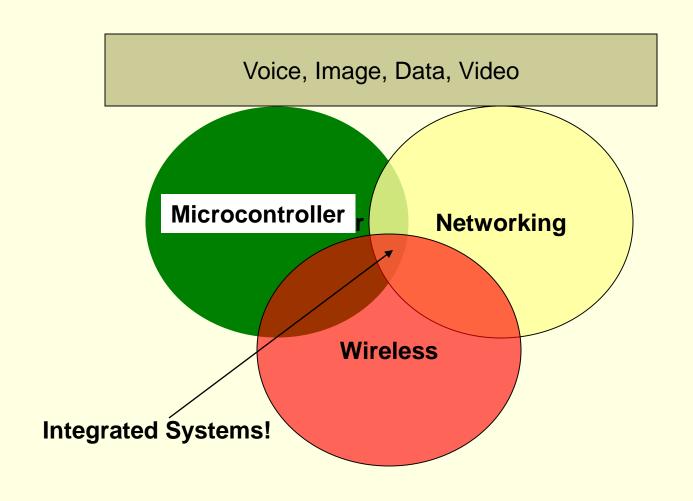

- Tele (Far) + Communications
- Early telecommunications
  - smoke signals and drums
  - visual telegraphy (or semaphore in 1792)
- Telegraph and telephone
  - Telegraph (1839)
  - Telephone (1876)
- Radio and television
- Telephony
  - Voice and Data

#### Communications and Networks

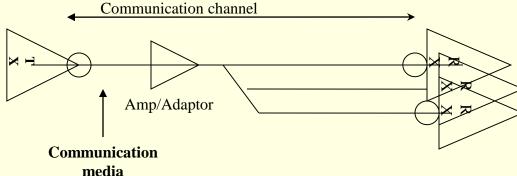

- Data Communications
  - Transmission of signals
    - Encoding, interfacing, signal integrity, multiplexing etc.
- Networking
  - Topology & architecture used to interconnect devices
- Networks of communication systems

#### Network Trends (1980-Present)

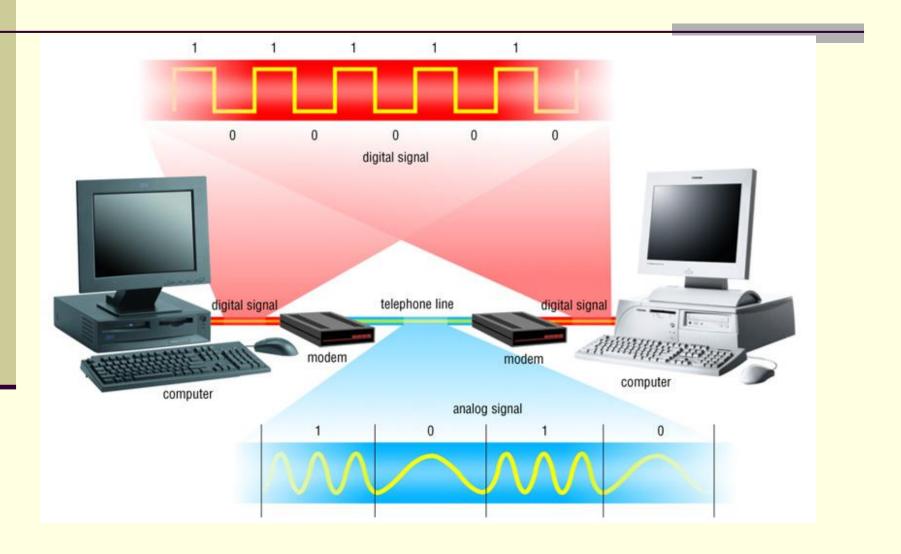

## **Communication Systems**

- Process describing transfer of information, data, instructions between one or more systems through some media
  - Examples
    - people, computers, cell phones, etc.
    - Computer communication systems
- Signals passing through the communication channel can be Digital, or analog
  - Analog signals: continuous electrical waves
  - Digital signals: individual electrical pulses (bits)
- Receivers and transmitters: desktop computers, mainframe computers, etc.
  Communication channel

## **Communication Systems**

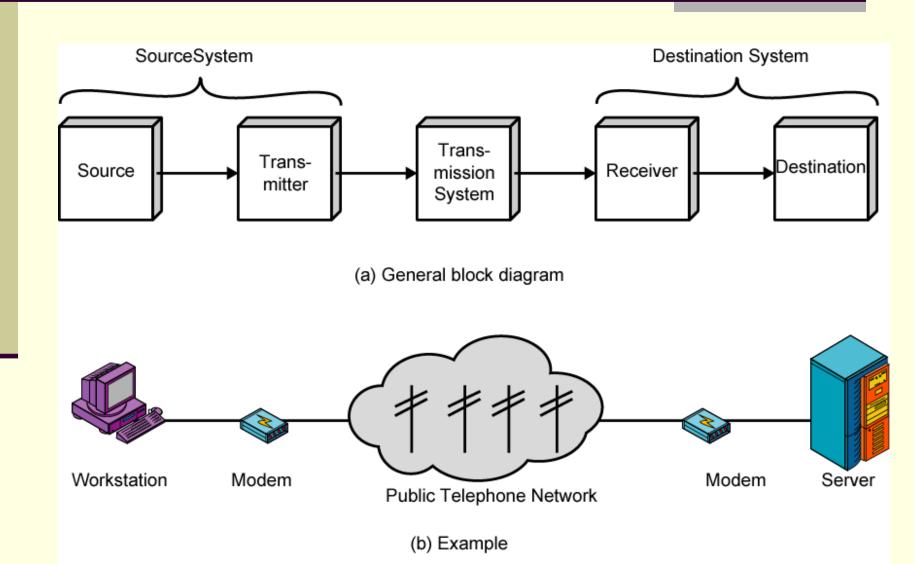

## **Communications Components**

- Basic components of a communication system
  - Communication technologies
  - Communication devices
  - Communication channels
  - Communication software

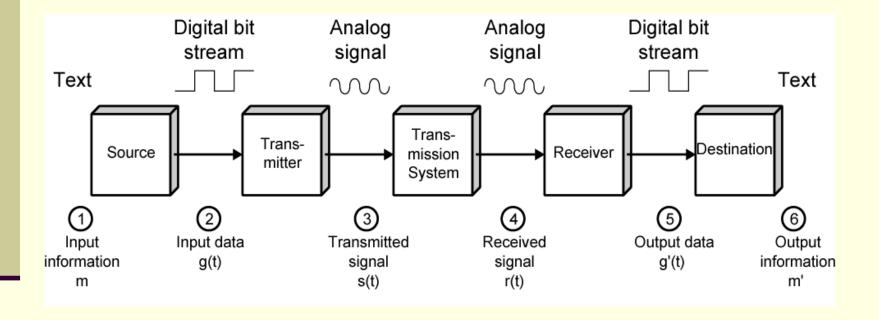

#### A Communications Model

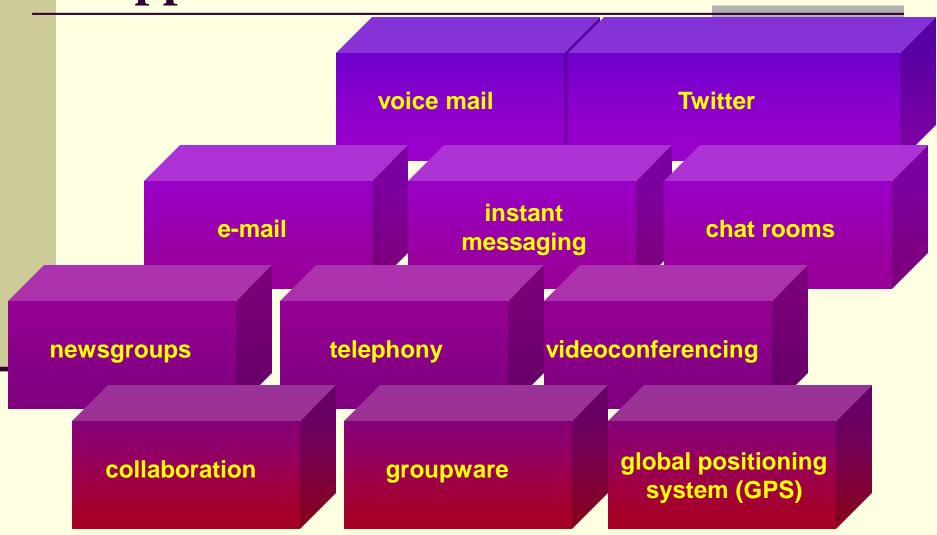

#### **Communications Tasks**

Transmission system utilization	Addressing
Interfacing	Routing
Signal generation	Recovery
Synchronization	Message formatting
Exchange management	Security
Error detection and correction	Network management
Flow control	

#### Data Communications Model

## Communication Technology Applications

## Communication Technologies - Applications

- Different technologies allowing us to communicate
  - Examples: Voice mail, fax, email, instant message, chat rooms, news groups, telephony, GPS, and more
- Voice mail: Similar to answering machine but digitized
- Fax: Sending hardcopy of text or photographs between computers using fax modem
- Email: electronic mail sending text, files, images between different computer networks must have email software
  - More than 1.3 billion people send 244 billion messages monthly!
- Chat rooms: Allows communications in real time when connected to the Internet
- Telephony: Talking to other people over the Internet (also called VoIP)
  - Sends digitized audio signals over the Internet
  - Requires Internet telephone software
- Groupware: Software application allowing a group of people to communicate with each other (exchange data)
  - Address book, appointment book, schedules, etc.
- GPS: consists of receivers connected to satellite systems
  - Determining the geographical location of the receiver
  - Used for cars, advertising, hiking, tracking, etc.

#### **Communication Devices**

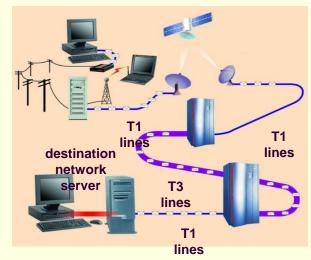

- Any type of **hardware** capable of transmitting data, instructions, and information between devices
  - Functioning as receiver, transmitter, adaptor, converter
  - Basic characteristics: How fast, how far, how much data!
  - Examples: Dial-up modems, ISDN, DSL modems, network interface cards
    - Dial-up modem: uses standard phone lines
      - Converts digital information into analog
      - Consists of a modulator and a demodulator
      - Can be external, internal, wireless
    - ISDN and DSL Modem: Allows digital communication between networks and computers
      - Requires a digital modem
      - Digital is better than analog why?
    - Cable modem: a modem that transmits and receives data over the cable television (CATV) network
      - Also called broadband modem (carrying multiple signals)
      - The incoming signal is split
      - Requires a cable modem
    - Network interface cards: Adaptor cards residing in the computer to transmit and receiver data over the network (NIC)
      - Operate with different network technologies (e.g., Ethernet)

#### **Communication Software**

- Examples of applications (Layer 7) take advantage of the transport (Layer 4) services of TCP and UDP
  - Hypertext Transfer Protocol (HTTP): A client/server application that uses TCP for transport to retrieve HTML pages.
  - Domain Name Service (DNS): A name-to-address translation application that uses both TCP and UDP transport.
  - Telnet: A virtual terminal application that uses TCP for transport.
  - **File Transport Protocol (FTP):** A file transfer application that uses TCP for transport.
  - Trivial File Transfer Protocol (TFTP): A file transfer application that uses UDP for transport.
  - Network Time Protocol (NTP): An application that synchronizes time with a time source and uses UDP for transport.
  - Border Gateway Protocol (BGP): An exterior gateway routing protocol that uses TCP for transport. BGP is used to exchange routing information for the Internet and is the protocol used between service providers.

#### **Communication Channels**

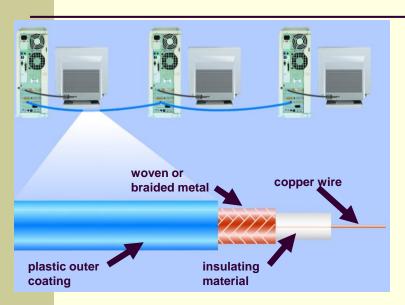

- A channel is a path between two communication devices
- Channel capacity: How much data can be passed through the channel (bit/sec)
  - Also called channel bandwidth
  - The smaller the pipe the slower data transfer!
- Consists of one or more transmission media
  - Materials carrying the signal
  - Two types:
    - Physical: wire cable
    - Wireless: Air

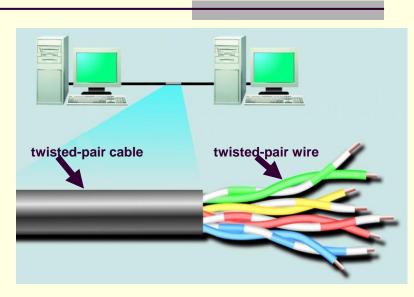

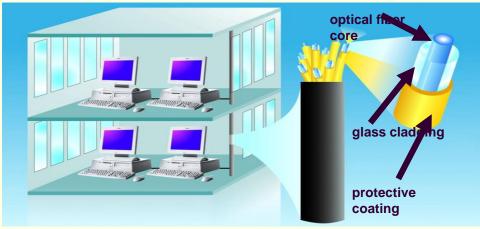

### Physical Transmission Media

- A tangible media
  - Examples: Twisted-pair cable, coaxial cable, Fiber-optics, etc.
- Twisted-pair cable:
  - One or more twisted wires bundled together (why?)
  - Made of copper
- Coax-Cable:
  - Consists of single copper wire surrounded by three layers of insulating and metal materials
  - Typically used for cable TV
- Fiber-optics:
  - Strands of glass or plastic used to transmit light
  - Very high capacity, low noise, small size, less suitable to natural disturbances

## Physical Transmission Media

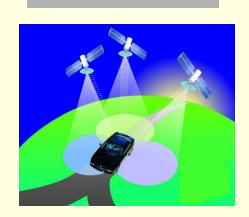

#### Wireless Transmission Media

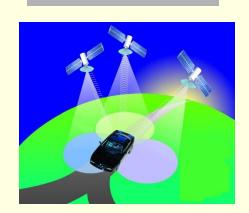

- Broadcast Radio
  - Distribute signals through the air over long distance
  - Uses an antenna
  - Typically for stationary locations
  - Can be short range
- Cellular Radio
  - A form of broadcast radio used for mobile communication
  - High frequency radio waves to transmit voice or data
  - Utilizes frequency-reuse

#### Wireless Transmission Media

#### Microwaves

- Radio waves providing high speed transmission
- They are point-to-point (can't be obstructed)
- Used for satellite communication
- Infrared (IR)
  - Wireless transmission media that sends signals using infrared light- waves - Such as?

## Physical Transmission Media

Type of Cable and LAN	Transfer Rates
Twisted Pair	
10Base-T (Ethernet)	10 Mbps
100Base-T (Fast Ethernet)	100 Mbps
1000Base-T (Gigabit Ethernet)	1000 Mbps
Token ring	4 - 16 Mbps
Coaxial Cable	
10Base2 (ThinWire Ethernet)	10 Mbps
10Base5 (ThickWire Ethernet)	10 Mbps
Fiber-Optic Cable	
10Base-F (Ethernet)	10 Mbps
100Base-FX (Fast Ethernet)	100 Mbps
FDDI (Fiber Distributed-Data Interface) token ring	100 Mbps

100 Mbps is how many bits per sec?

Which is bigger: 10,000 Mbps, 0.01Tbps or 10Gbps?

#### Wireless channel capacity:

Channel	Transfer Rates
Broadcast radio	Up to 2 Mbps
Microwave radio	45 Mbps
Communications satellite	50 Mbps
Cellular radio	9,600 bps to 14.4 Kbps
Infrared	1 to 4 Mbps

#### **Networks**

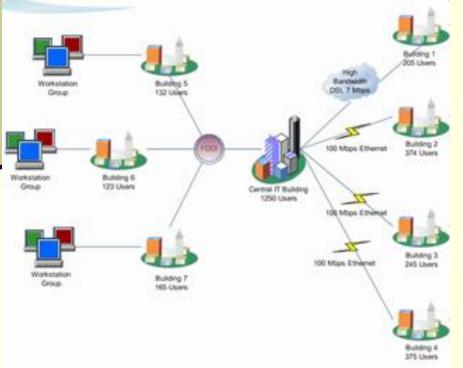

- Collection of computers and devices connected together
- Used to transfer information or files, share resources, etc.
- What is the largest network?
- Characterized based on their geographical coverage, speed, capacities
- Networks are categorized based on the following characteristics:
  - Network coverage: LAN, MAN, WAN
  - Network topologies: how the computers are connected together
  - Network technologies
  - Network architecture

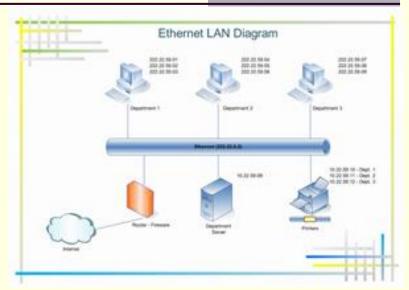

## Network coverage

- Local Area Networks:
  - Used for small networks (school, home, office)
  - Examples and configurations:
    - Wireless LAN or Switched LAN
    - ATM LAN, Frame Ethernet LAN
    - Peer-2-PEER: connecting several computers together (<10)</p>
    - Client/Server: The serves shares its resources between different clients
- Metropolitan Area Network
  - Backbone network connecting all LANs
  - Can cover a city or the entire country
- Wide Area Network
  - Typically between cities and countries
  - Technology:
    - Circuit Switch, Packet Switch, Frame Relay, ATM
  - Examples:
    - Internet P2P: Networks with the same network software can be connected together (Napster)

#### LAN v.s WAN

LAN - Local Area Network a group of computers connected within a building or a campus (Example of LAN may consist of computers located on a single floor or a building or it might link all the computers in a small company.

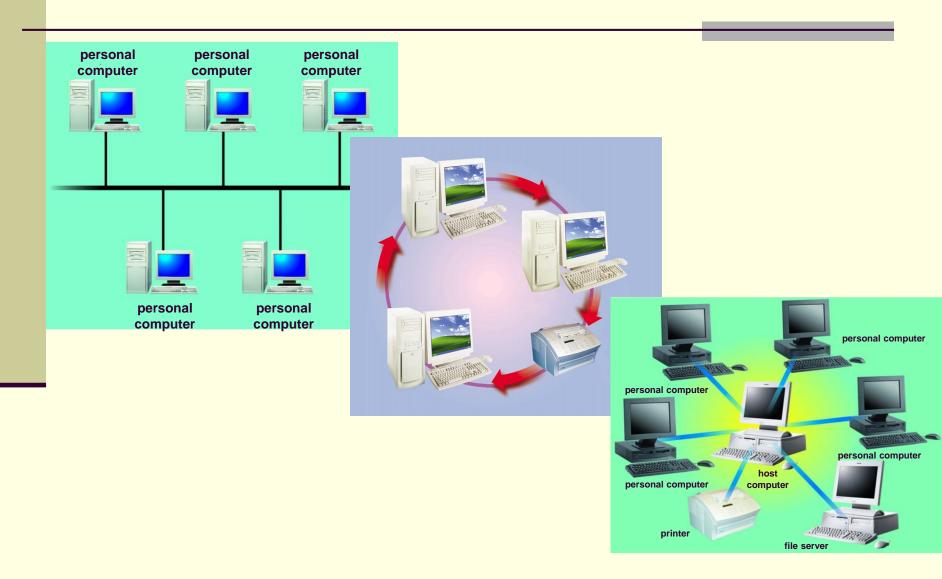

WAN - A network consisting of computers of LAN's connected across a distance WAN can cover small to large distances, using different topologies such as telephone lines, fiber optic cabling, satellite transmissions and microwave transmissions.

## **Network Topologies**

- Configuration or physical arrangement in which devices are connected together
- BUS networks: Single central cable connected a number of devices
  - Easy and cheap
  - Popular for LANs
- RING networks: a number of computers are connected on a closed loop
  - Covers large distances
  - Primarily used for LANs and WANs
- STAR networks: connecting all devices to a central unit
  - All computers are connected to a central device called hub
  - All data must pass through the hub
  - What is the problem with this?
  - Susceptible to failure

## **Network Topologies**

#### **Network Architecture**

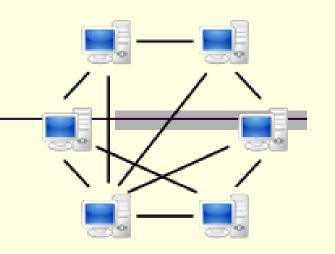

- Refers to how the computer or devices are designed in a network
- Basic types:
  - Centralized using mainframes
  - Peer-2-Peer:
    - Each computer (peer) has equal responsibilities, capacities, sharing hardware, data, with the other computers on the peer-to-peer network
    - Good for small businesses and home networks
    - Simple and inexpensive
  - Client/Server:
    - All clients must request service from the server
    - The server is also called a host
    - Different servers perform different tasks: File server, network server, etc.

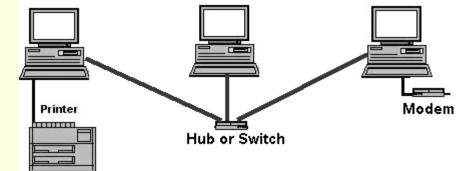

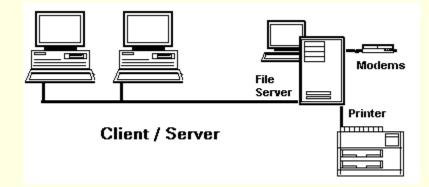

#### P2P vs Client-Server

**Peers** make a portion of their resources, such as processing power, disk storage or network bandwidth, directly available to other network participants, without the need for central coordination by servers or stable hosts

## Peer-to-Peer Examples

## **Network Technologies**

#### Zigbee

- High level communication protocols using small, low-power digital radios based on the IEEE 802.15.4
- Wireless mesh networking proprietary standard

#### Bluetooth

- Uses radio frequency
- Typically used for close distances (short range- 33 feet or so)
- Transmits at 1Mbps
- Used for handheld computers to communicate with the desktop

#### ■ IrDA

- Infrared (IR) light waves
- Transfers at a rate of 115 Kbps to 4 Mbps
- Requires light-of-sight transmission

#### RFID

- Radio frequency identification
- Uses tags which are places in items
- Example: merchandises, toll-tags, courtesy calls, sensors!

#### WAP

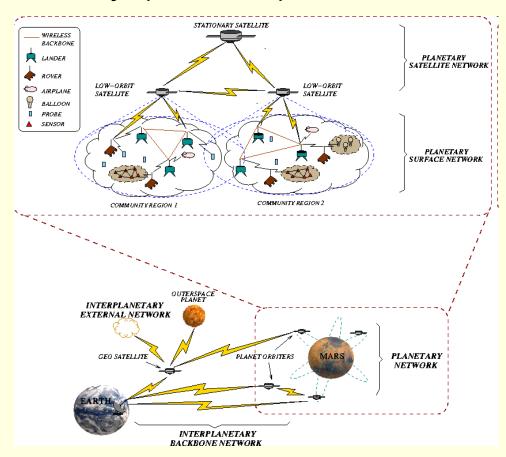

- Wireless application protocol
- Data rate of 9.6-153 kbps depending on the service type
- Used for smart phones and PDAs to access the Internet (email, web, etc)

## **Network Examples**

- IEEE 802.15.4
  - Low-rate wireless personal area networks (LR-WPANs)
  - Bases for e ZigBee, WirelessHART, and MiWi specification
  - Also used for 6LoWPAN and standard Internet protocols to build a Wireless Embedded Internet (WEI)
- Intranets
  - Used for private networks
  - May implement a firewall
    - Hardware and software that restricts access to data and information on a network
- Home networks
  - Ethernet
  - Phone line
  - HomeRF (radio frequency- waves)
  - Intelligent home network
- Vehicle-to-Vehicle (car2Car) <a href="http://www.car-to-car.org/">http://www.car-to-car.org/</a>
  - A wireless LAN based communication system to guarantee Europeanwide inter-vehicle operability

## **Network Examples**

Interplanetary (Internet) Network

#### **Network Example:**

#### Telephone Networks

- Called the Public Switched Telephone Network (PSTN)
- World-wide and voice oriented (handles voice and data)
- Data/voice can be transferred within the PSTN using different technologies (data transfer rate bps)
- Dial-up lines:
  - Analog signals passing through telephone lines
  - Requires modems (56 kbps transfer rate)
- ISDN lines:
  - Integrated Services Digital Network
  - Digital transmission over the telephone lines
  - Can carry (multiplex) several signals on a single line
- DSL
  - Digital subscribe line
  - ADSL (asymmetric DSL)
    - receiver operated at 8.4 Mbps, transmit at 640 kbps
- T-Carrier lines: carries several signals over a single line: T1,T3
- Frame Relay
- ATM:
  - Asynchronous Transfer Mode
  - Fast and high capacity transmitting technology
  - Packet technology

#### Switching Technologies:

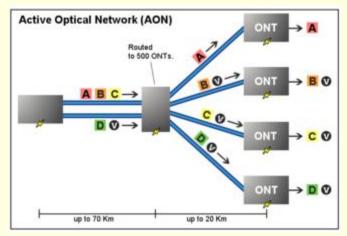

#### Technologies:

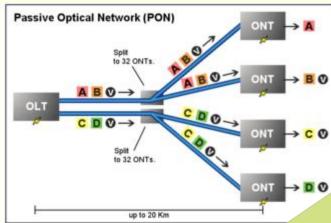

- Circuit Switching
- Packet Switching
- Message Switching
- Burst Switching

#### **Network Example:**

#### **Optical Networks**

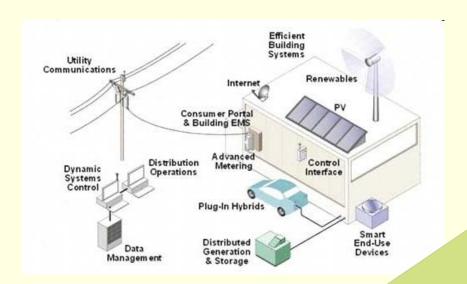

- Fiber-to-the-x
  - Broadband network architecture that uses optical fiber to replace copper
  - Used for last mile telecommunications
  - Examples: Fiber-to-the-home (FTTH); Fiber-to-the-building (FTTB); Fiber-to-the premises (FTTP)
- Fiber Distribution Network (reaching different customers)
  - Active optical networks (AONs)
  - Passive optical networks (PONs)

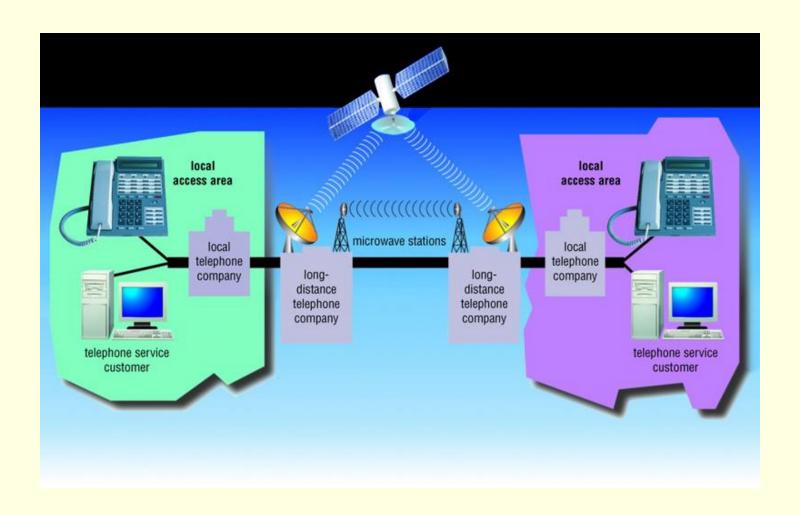

### **Network Example**

- Smart Grid
  - Delivering electricity from suppliers to consumers using digital technology to save energy
- Storage Area Networks
- Computational Grid Networks

#### **Network Example:**

Telephone Networks

## **Network Examples**

Type of Line	Transfer Rates	Approximate Monthly Cost
Dial-up	Up to 56 Kbps	Local or long-distance rates
ISDN (BRI)	Up to 128 Kbps	\$10 to \$40
ADSL	128 Kbps – 9 Mbps	\$40 to \$80
Cable TV (CATV)	128 Kbps – 2.5 Mbps	\$30 to \$50
T1	1.544 Mbps	\$1,000 or more
Т3	44 Mbps	\$10,000 or more
ATM	155 Mbps to 622 Mbps	\$8,000 or more

## Cellular Network Examples

#### 0G

- Single, powerful base station covering a wide area, and each telephone would effectively monopolize a channel over that whole area while in use (developed in 40's)
- No frequency use or handoff (basis of modern cell phone technology)

#### **1**G

- Fully automatic cellular networks
- introduced in the early to mid 1980s

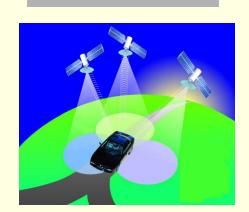

#### **2G**

- Introduced in 1991 in Finland on the GSM standard
- Offered the first data service with person-to-person SMS text messaging

## Cellular Network Examples

#### **3G**:

- Faster than PCS; Used for multimedia and graphics
- Compared to 2G and 2.5G services, 3G allows simultaneous use of speech and data services and higher data rates (up to 14.4 Mbit/s on the downlink and 5.8 Mbit/s.

#### **4G**:

- Fourth generation of cellular wireless;
- providing a comprehensive and secure IP based service to users "Anytime, Anywhere" at high data rates
