KEPERCAYAAN ISTRI ANAK BUAH KAPAL TERHADAP RISIKO HIV & AIDS DI KABUPATEN REMBANG TAHUN 2013

xii + 132 halaman + 12 tabel + 4 gambar + 8 lampiran

Anak Buah Kapal (ABK) termasuk berisiko tinggi terkena HIV&AIDS;, karena mereka termasuk seksual aktif, dan besar kemungkinan yang berhubungan dengan Pekerja Seks Komersial (PSK) dalam pelayarannya. Menurut data dari Dinas Kesehatan Kabupaten Rembang terdapat peningkatan jumlah kasus baru HIV&AIDS;. Berdasarkan latar belakang tersebut istri ABK termasuk kelompok berisiko. Tujuan penelitian adalah untuk mengetahui Kepercayaan Istri Anak Buah Kapal terhadap risiko HIV & AIDS di Kabupaten Rembang.

Jenis penelitian adalah penelitian kualitatif dengan metode wawancara mendalam kepada subjek penelitian yaitu istri Anak Buah Kapal (ABK). Pengambilan sampel melalui snowball sampling dan mendapatkan Subjek Penelitian sejumlah 6 orang istri ABK. Triangulasi yang digunakan adalah triangulasi sumber yaitu keluarga, teman dekat, Dinas Kesehatan dan Puskesmas I Kabupaten Rembang.

Hasil penelitian menunjukkan sebagian besar subjek penelitian menilai bahwa dirinya merasa tidak berisiko terkena HIV&AIDS; karena tingginya tingkat kepercayaan istri ABK terhadap suami untuk tidak melakukan hubungan seksual dengan orang lain (perceived susceptibility). Mereka percaya akan keseriusan HIV&AIDS; karena HIV&AIDS; termasuk penyakit yang mematikan serta belum ada obatnya (perceived seriousness). Banyak ancaman yang dirasakan oleh istri ABK apabila terkena HIV&AIDS; bisa menurunkan kekebalan tubuh manusia (perceived threat of disease). Kemungkinan tindakan yang dilakukan istri ABK supaya terhindar dari HIV&AIDS; yaitu tidak melakukan hubungan seksual dengan orang lain dan memakai kondom ketika berhubungan seksual dengan pasangannya (Likelihood of looking recommended preventive health action).

Diperlukan sosialisasi rutin dari Dinas Kesehatan dan Puskesmas untuk mencegah terjadinya penularan HIV&AIDS; pada kelompok istri ABK, istri ABK agar lebih sadar terhadap penggunaan kondom secara konsisten, Mengoptimalkan kegiatan konseling HIV&AIDS; yang dibina oleh Dinas Kesehatan dan

Puskesmas setempat.

THE BELIEF OF SAILOR MEN WIFE TO RISK OF HIV & AIDS IN THE REMBANG DISTRICT YEAR 2013

xii + 132 pages + 12 tables + 4 images + 8 attachments

Sailor Men has a high risk of HIV & AIDS, because they are sexual active, and likely related to commercial sex worker in their voyage. According to Rembang Health Office data, there the new cases of HIV & AIDS was increased. Based on the background of the wife of Sailor Men including risk groups. The purpose of this study is to know the belief of sailor men wife to risk of HIV & AIDS in the Rembang District.

This is a qualitative research, with in-depth interview method to the wife of Sailor Men. Snowball sampling technique was used for getting research subjects of 6 people Sailor Men wife. The cross check informants for triangulation were family, close friends, health officer and health center 1 officer of Rembang district.

The result showed the majority of subjects has perception that she was not at risk of HIV & AIDS, high level of confidence because Sailor Men wife believed the husband not has a sexual relationship with another person (perceived susceptibility). They believe in the seriousness of HIV & AIDS, including a lethal disease and no cure (perceived seriousness). Many threat was feeling the wife of Sailor Men if affected HIV & AIDS, can reduce the human immune (perceived threat of disease). Likely actions taken the wife of her so that spared from HIV & AIDS are not sexual intercourse with another person and use a condom when having sex with her partner (Likelihood of looking recommended preventive health action).

Routine socialization is needed from a health office and health center to prevent the spread of HIV & AIDS on Sailor Men wife group, wife of Sailor Men to be more aware of use condoms consistently, optimizing HIV & AIDS counselling activities are guided by the health office and health center.
