ABSTRAK

Ketepatan waktu pengembalian dokumen rekam medis rawat inap ke assembling berpengaruh terhadap kelancaran proses pelayanan rekam medis. Dikarenakan kurangnya SDM (Sumber Daya Manusia) di unit rekam medis, sebab di unit rekam medis hanya ada 2 pegawai dan lulusan dari DIII Rekam Medis dan Informasi Kesehatan. Tujuan dari penelitian ini adalah menganalisis aspek pengendalian tingkat keterlambatan pengembalian Dokumen Rekam Medis dari Unit Rawat Inap ke assembling di Rumah Sakit Bhayangkara Semarang.

Metode penelitian dilakukan secara wawancara, observasi, dan checklist dengan menggunakan pendekatan crossectional. Sumber data yang diambil berdasarkan buku ekspedisi penerimaan dokumen rekam medis rawat inap dari unit rawat inap ke assembling dan hasil wawancara dilakukan kepada petugas assembling yang berkaitan dengan aspek pengendalian tingkat keterlambatan pengembalian dokumen rekam medis rawat inap ke assembling.

Hasil yang diperoleh dari penelitian ini yaitu prosentase tingkat keterlambatan pengembalian dokumen rekam medis rawat inap ke assembling secara keseluruhan yaitu sebesar 98,42%, dimana tingkat keterlambatan yang terjadi adalah tinggi. Tingkat keterlambatan pada masing-masing bangsal terjadi pada bangsal Seruni yaitu 44,09%. Dan rata-rata lamanya tingkat keterlambatan adalah 209 hari dan yang paling cepat pengembaliannya adalah 1 hari. Dan rata-rata/ bangsal adalah 43 hari. Alur pengembalian dokumen rekam medis rawat inap ke assembling dengan cara petugas rekam medis mengambil dokumen rekam medis rawat inap ke bangsal-bangsal setelah itu di assembling, koding indeksing, terus apa bila sudah lengkap di masukkan ke rak filing apa bila belum lengkap di kembalikan ke unit rawat inap (bangsal).

Peneliti menyarankan agar perlunya sosialisasi tentang protap kepada petugas bangsal mengenai pengembalian dokumen rekam medis. Menambah petugas rekam medis khususnya pengolahan data.

ABSTRACT

Timeliness of medical record documents the return hospitalization to assembling to smooth the process of medical record service. Due to the lack of HR (human resources) in the unit medical record, medical record unit because there are only 2 officers and graduates of the DIII medical record and health information. The purpose of this research is to analyze aspects of controlling the level of delay in repayment of medical record Document Inpatient Unit to the Bhayangkara hospital assembling of Semarang.

Research methods made in interviews, observation, and checklist using the crossectional approach. The source data are taken on the basis of the book expedition medical record documents the acceptance of inpatient care inpatient unit of the assembling and the results of interviews conducted to officials assembling related aspects of controlling the level of delay in medical record documents the return hospitalization to assembling.

The results obtained from this research that a percentage of the level of delay in medical record documents the return hospitalization to the assembling of a whole which is equal to 98,42%, where the level of delay that occurred was high. The level of delay in each ward took place on halls, wiping IE 44,09%. And the average length of delay rate was 208 days and the most immediate value is 1 day. And average/Ward was 43 days. Medical record documents the return flow of inpatient care to assembling by means of medical record officers take document inpatient medical record to the ward-ward after that in assembling, indeksing coding, keep what if it fully insert into the shelf filing what if incomplete return to inpatient units (wards).

Researchers suggest that the need for dissemination of protap to the wards of medical record document returns. Add medical record officers in particular data processing.
