### ABSTRAK

This thesis entitled "Structures of the Nominal Groups of Opinion Articles in the Jakarta Post" which aims at describing the types of nominal group pattern produced by the native and non native writer in writing opinion. This opinion writings were published on the Jakarta Post edition March 2013.

In doing this research the researcher employed descriptive qualitative method. Meanwhile, the data of this research were taken from the opinions written by a native speaker from New York, America and the non native speaker from Jakarta, Indonesia. In collecting the data, the researcher downloaded the Jakarta Post edition March 2013 from the internet.

The result shows that both native and non native produced different number of nominal group in their writings. Besides that, it also gives different pattern of nominal group. The highest nominal group pattern produced by the native writer is D+T+Q pattern with 25 number. Whereas, the non native writer produced D+T+Q with 17 numbers. And the least number of nominal group pattern produced by the native writer is N+T+Q, D+T+C+Q, D+T+N, D+T+N+Q, T+C with 1 number. Meanwhile, the least number of nominal group pattern produced by the non native writer is N+E+T, N+T+Q, N+T, E+T+Q, E+C+T, D+T+E+C and T+C+Q with 1 number. It can be seen that nonnative writer produces more deictic than the native writer in their writing. It indicates that the nonnative writer tend produce more indefinite or definite article in his writing which indicates that the nonnative writer wants to emphasis the thing he wants to tell to the readers. Meanwhile, the native writer wants to emphasize the thing he wants to explain to the readers.

Kata Kunci : Nominal Group, Opinion Articles, Functional Components

### ABSTRACT

This thesis entitled "Structures of the Nominal Groups of Opinion Articles in the Jakarta Post" which aims at describing the types of nominal group pattern produced by the native and non native writer in writing opinion. This opinion writings were published on the Jakarta Post edition March 2013.

In doing this research the researcher employed descriptive qualitative method. Meanwhile, the data of this research were taken from the opinions written by a native speaker from New York, America and the non native speaker from Jakarta, Indonesia. In collecting the data, the researcher downloaded the Jakarta Post edition March 2013 from the internet.

The result shows that both native and non native produced different number of nominal group in their writings. Besides that, it also gives different pattern of nominal group. The highest nominal group pattern produced by the native writer is D+T+Q pattern with 25 number. Whereas, the non native writer produced D+T+Q with 17 numbers. And the least number of nominal group pattern produced by the native writer is N+T+Q, D+T+C+Q, D+T+N, D+T+N+Q, T+C with 1 number. Meanwhile, the least number of nominal group pattern produced by the non native writer is N+E+T, N+T+Q, N+T, E+T+Q, E+C+T, D+T+E+C and T+C+Q with 1 number. It can be seen that nonnative writer produces more deictic than the native writer in their writing. It indicates that the nonnative writer tend produce more indefinite or definite article in his writing which indicates that the nonnative writer wants to emphasis the thing he wants to tell to the readers. Meanwhile, the native writer wants to emphasize the thing he wants to explain to the readers.
